

Today.

We all have lost a loved one to a disease that we suspect was not diagnosed in time or treated in the right way.

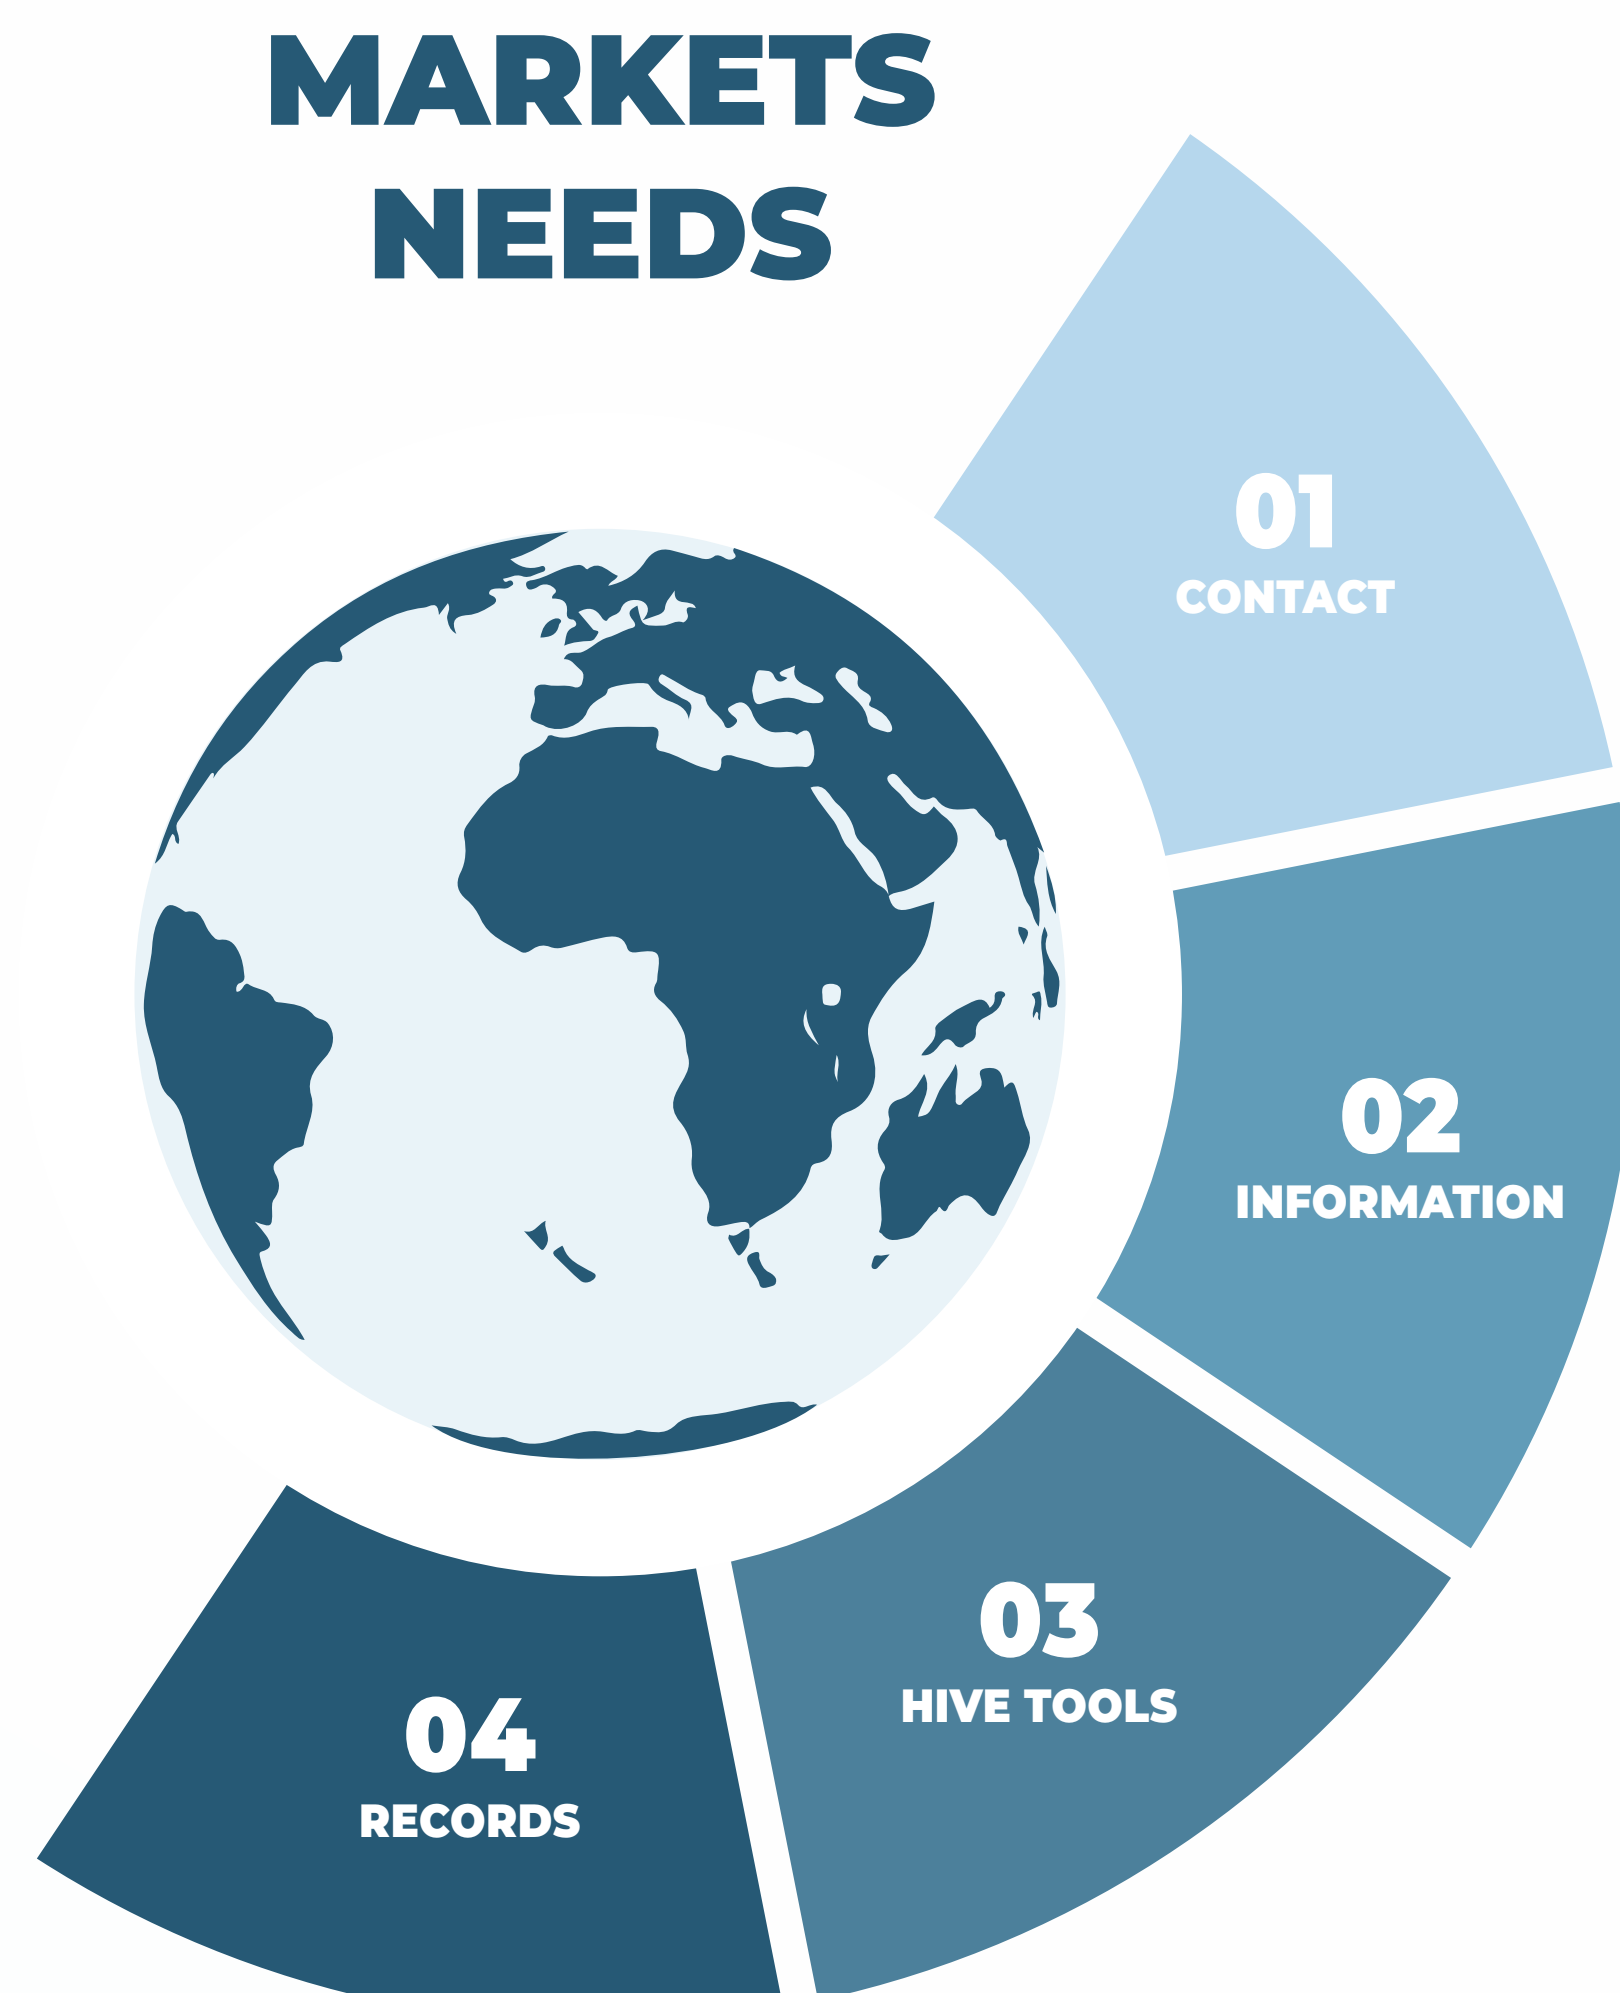

WHATS GOING ON?

A multitude of computerized systems are in use, they have cost billions to develop, but have not created the right infrastructure needed by both healthcare providers and users.

WHY?

Healthcare processes are complex and in them interact a lot of people and organizations.

The divided approach of each need is the reason why there is not one system widely used.

We created BeeMedics a blockchain-based infrastructure and platform, in which every single person and healthcare service and product provider can work and interact with each other, based on a smart system that connects users with information and the community.

It's the perfect blend of healthcare network, records, databases and a publishing system.
